```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution.

Histatins are chistidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the candidosis. Also disclosed are compositions comprising the histatin compositions comprising the histatin compositions comprising the histatin of polypeptide or polynucleotide, and at least one compositions. The chistatin polynucleotide, polypeptide, or the cosmetic composition composition composition composition in the polypeptide, is useful for treating (e.g. gene therapy) a conjugation or in the possitional cloning of genes. Specifically, the composition polynucleotide is also useful for treating fungal or bacterial composition or in the positional cloning of genes. Specifically, the composition composition of the coral cavity (e.g. dental caries, plaque or tartar), composition of the oral cavity (e.g. dental caries, plaque or tartar), composition of the oral cavity (e.g. dental caries, plaque or tartar), composition of the oral cavity (e.g. dental caries, plaque or tartar), composition or infections such as systemic candida infection. The polypeptide or polynucleotide is useful for veterinary applications e.g. for treating mastitis. The sequence presented is the bovine mammary tissue composition and energific sequence and manuary tissue of the constant of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-AUG-1999;

consistions rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin complyshed or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The chistatin polynucleotide, polypeptide, or the comment consistion of comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The chistatin polynucleotide is also useful in genome mapping, physical companing or in the positional cloning of genes. Specifically, the collections of the oral cavity (e.g. dense. Specifically, the collections of the oral cavity (e.g. dental carries, plaque or tartar), companing, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       23-AUG-1999;

The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral
                                                                                           New histatin polynucleotides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or systemic infections

Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cow; gene; ss; histatin; bovine; salivary secretion; oral cavity; non-immune defence system; oral candidosis; gene therapy; microbial infection; fungal infection; dental caries; plaque; tartar; cystic fibrosis; systemic infection; Candida infection; mastitis; fungicide; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histarin polynucleotide, polypeptide, or the commentic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) disorder in a mammal, particularly migrobial or fungal infections. Histatins are competitive in the malivary secretions. They are believed to function as part of the non-immune defence system, particularly in the conal cavity and have promise as therapeutic agents in humans with oral conditions. Also disclosed are compositions comprising the histatin of completide or polynucleotide, and at least one composition composition of composition composition composition composition composition composition composition composition comprising the polynucleotide, is useful for treating (e.g. gene therapy) a comprising the polypeptide, is useful for treating (e.g. gene therapy) a comprising the polynucleotide is also useful in genome mapping, physical composition or polynucleotide is also useful for treating fungal infections. The consistion of the coral cavity (e.g. dental caries, plaque or tartar), composition of the care skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating cor polynucleotide is also useful for veterinary applications e.g. for corpolynucleotide is also useful for veterinary applications e.g. for corpolynucleotide is also useful for veterinary applications e.g. for corpolynucleotide is also useful for veterinary applications e.g. for corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolations of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynophide corpolynucleotide is also useful for page of the polynoph

cc polypeptides, which comprise sequences expressed in bovine. Histatins are cc histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the coral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin cc polypeptide or polynucleotide, and at least one component consisting of cc physiological or pharmaceutical carriers or immunostimulants. The cc histatin polypucleotide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The chistatin polynucleotide is also useful for treating fungal or bacterial cc polypeptide or polynucleotide is useful for treating fungal or bacterial conjupeptide or polynucleotide is useful for treating fungal or bacterial cc infections of the oral cavity (e.g. dental caries, plaque or tartar), cc vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating cc systemic infections such as systemic Candida infection. The polypeptide cor polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine cc instatin like polypeptide.
                                                                                                                                Query Match:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍
The invention discloses isolated histatin polynucleotides and polypeptides, which comprise sequences expressed in bovine. Histatins are histidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the oral cavity and have promise as therapeutic agents in humans with oral candidosis. Also disclosed are compositions comprising the histatin polypeptide or polynucleotide, and at least one component consisting of physiological or pharmaceutical carriers or immunostimulants. The histatin polynucleotide, polypeptide, or the cosmetic composition comprising the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. Specifically, the polypeptide or polynucleotide is useful for treating fungal or bacterial infections of the oral cavity (e.g. dental caries, plaque or tartar), vagina, urethra, ear, skin, respiratory tract (e.g. cystic fibrosis caused by Pseudomonas acruginosa), mucosa or eye, as well as for treating systemic infections such as systemic Candida infection. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for treating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Alignment Scores:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention discloses isolated histatin polynucleotides and copyreptides, which comprise sequences expressed in bovine. Histatins are chistidine rich and specific to the salivary secretions. They are believed to function as part of the non-immune defence system, particularly in the caral cavity and have promise as therapeutic agents in humans with oral caralidosis. Also disclosed are compositions comprising the histatin copyreptide or polynucleotide, and at least one composition tonsisting of physiological or pharmaceutical carriers or immunostimulants. The composition polynucleotide, polypeptide, or the cosmetic composition composition composition composition and the polypeptide, is useful for treating (e.g. gene therapy) a disorder in a mammal, particularly microbial or fungal infections. The chistatin polynucleotide is also useful for treating fungal or bacterial caping or in the positional cloning of genes. Specifically, the copypeptide or polynucleotide is useful for treating fungal or bacterial composition or the oral cavity (e.g. dental cares, plaque or tartar), corrections of the oral cavity (e.g. dental cares, plaque or tartar), corrections of the oral cavity (e.g. dental cares, plaque or tartar), corrections of the oral cavity (e.g. dental cares, plaque or tartar), corrections of the oral cavity (e.g. dental cares, plaque or tartar), corrections of the oral cavity (e.g. dental cares, plaque or treating caused by Pseudomonas aeruginosa), mucosa or eye, as well as for treating systemic infections. The polypeptide or polynucleotide is also useful for veterinary applications e.g. for creating mastitis. The sequence presented is a cDNA encoding a bovine histatin like polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New histatin polynuclectides and polypeptides expressed in bovine tissues, useful for treating bacterial or fungal infections in mammals, e.g. infections of the oral cavity, vagina, urethra, ear or skin, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI;

The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human statherin (the present sequence) and human basic histidine-rich protein (AAY94528). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, addenocarcinoma, melanoma). The polynuclootide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hematopolesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, antenostatic and thrombolytic activity. Treceptor/ligand activity, antenostatic and thrombolytic cadherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.

                                                                                                                                                                                                                                                                                                                 The present sequence represents a human expressed sequence tag (EST) The polynucleotide, which is a secreted EST, and the encoded protein are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiseis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, activin/inhibin activity, catherin/tumour invasion suppressor activity, tumour inhibition activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Agostino N

                                                                                                                                                                                                                                                                                     The present invention relates to human lysine-rich statherin protein (LRSP) (AAY94526). The cDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with human statherin protein (AAY94527) and human basic histidine-rich protein (the present sequence). Human statherin is a phosphotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Tang

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDN/

                                                                                                                                                                           Pred. No.:
                                                                                                                                                                                                                  The present invention relates to novel human GENSET coding sequences (ACC51060-ACC51115) and proteins (ABR48453-ABR48508). The GENSET sequences are useful for preparing a composition for treating GENSET-related disorders. They can also be used as markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on Southern gels, as chromosome markers or tags to identify chromosomes, and as reagents in assays to quantitatively determined levels of GENSET expression in biological samples.
                                                                                                                                                                                                     Sequence 438
                                                                                                                                                                                                                                                                                                       Claim 1; Page 404-405; 505pp; English

The present invention relates to novel GENSET polynucleotides (ABE75404-ABE76368). The (ABE76404-ABE76368). The polynucleotides and polypeptides are used in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cytostatic; antiinflammatory; nootropic; neuroprotective; cardiant; gastrointestinal; gene therapy; GENSET; heavy metal toxicity; cance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 12; Page 295; 735pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABZ36425 standard; cDNA; 438 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel GENSET polynucleotides (ABE36404-ABE36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New GENSET polynucleotides and polypeptides, useful for treating heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, CNS, cardiovascular or gastrointestinal effects of the toxicity -
